PRINT DRIVER SYSTEM AND METHOD FOR PRINT JOB NOTIFICATION

ABSTRACT OF THE INVENTION

A print driver system and method are provided for print job notification. The method comprises: accepting a document at a print driver; presenting a user interface (UI) for accepting print job commands, such as the selection of a printer; presenting a UI for receiving notification commands, such as a text message of email address; sending the document for printing in response to the print job commands; and, sending a print job notification to an email address, in response to sending the document for printing. The print job notification can be for the purpose of reporting errors, a completed print job, the identity of the selected printer, or instructions to be carried out regarding the completed print job.
